

# CAR AND LANDING FIXTURES

## The Crown Jewel of The Lift

To us, the button is the first point of contact. It is the most striking visual element, the focus of the passenger, and the item in plainest sight. To us, the button is the "Crown Jewel of the Elevator".

Happiness is varied and colorful in Ametal's world of buttons, offering designs fit for any imagination. The touch-sensitive Lusso glass panels combine angular or circular forms with the imagery of your dreams.

The "Image" series of 2015 have expanded Lusso's horizons and raised the bar by offering a higher level of visual appeal than before. The new series have been designed with gusto for those who'd like to combine the pristine quality of white glass with colored lines of different mosaics, or those who'd rather enjoy minimal patterns on mirror surfaces. All you have to do to enjoy these new elements and add value to your business is to take a look at Lusso's new models and pick the design that befits you and your customer the most.

## The Magic of Black Glass!

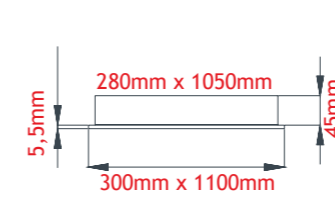

Besides having all the necessary functions, Glass Series of Lusso Button has more to make cabin interiors elegant. The variety of color and pattern options set its details free. It is a classy alternative for cabin interiors where generally steel panels are used.
